

The Optimizer Rink Divider

The Optimizer is an aluminum-framed rink divider – the premier solution for arena managers, hockey coaches and associations looking to ‘cut the ice’ to facilitate half-ice practices as recommended by various federations, including USA Hockey’s American Development Model (ADM).

Designed for ultimate ease of installation and long wearing performance, the Optimizer is shipped on its own storage cart, and takes less than 20 minutes to assemble and disassemble.

Made from welded aluminum frames, each Optimizer panel measures 36” high by 90” long. Face plastic is .25” white UV Stabilized HDPE, and the top cap is red or blue .50” HDPE. Optional yellow kick plate is available.

The Optimizer is available in 85’ and 100’ lengths, but can be customized for other rink widths. We also offer the Optimizer in 42” height.

A gate panel is always included, and we offer netting as an option for upper puck containment.
