

Maximum insulation for better ice protection

ArenaDeck® Ice Blanket

Reflective insulation

ArenaDeck® Ice Blanket consists of a double layer of polyethylene bubbles, sandwiched between an aluminum surface, and a white polyethylene sheet. It is ideal for all outdoor insulation applications. A protective film is applied to the aluminum surface, virtually eliminating the risk of corrosion.

Using ArenaDeck® Ice Blanket to cover your ice surface can improve the efficiency by greatly reducing the impact of radiant heat and significantly decreasing the overall cost in ice maintenance.

Key features:

- Protective coating over aluminum surface
- Reduces refrigeration cost
- Quick, safe and easy to install
- Multi-Layer 8.4 mil Bubble Core
- Double bubble provides an effective thermal break
- Approved vapor barrier
- Available in 500, 750, and 1000 sq. ft. rolls
